

SpringWrap™

Full wrap treeguard

Description

SpringWrap™ is a unique full wrap treeguard designed to protect tree trunks.

Made from UV-stabilized high density polyethylene, it completely encases the trunk, keeping out direct light, herbicide spray drift, vermin and frost. And unlike a spiral, foil or cardboard guard, SpringWrap™ is very efficient at reducing lateral growth.

Application

Perfect for olive, nut, citrus and fruit trees.

Easy to install, simply pull open, place around trunk and guard will firmly wrap around the trunk when released, and they expand with trunk growth.

Benefits

- Protects from herbicide drift and vermin
- Suppresses lateral growth
- Encourages straight growth
- Easy & quick to install
- Expands with trunk growth
